

POOL WATER CHEMISTRY

It is necessary for the longevity of the Magicolors finish and as a condition of this warranty that the following chemical parameters are maintained:

Cl	1 - 3	ppm
pH	7.2 - 7.4	
Total Alkalinity (TA)	80 - 100	ppm
Calcium Hardness (CH)	200 - 400	ppm
Cyanuric Acid	less than 50	ppm
Sequest	12	ppm

The initial fill water is the most important water that the pool will receive. The initial fill water must be tested, recorded and adjusted to the above parameters before it has an opportunity to affect the new Magicolors finish.
